

Party divide on Surrey solar farm?

21 November 2024

Plans for a Surrey solar farm have been questioned as an MP has called for the government to look again at the “nationally significant” decision. Jeremy Hunt, MP for Godalming and Ash, has supported the request of Compton Parish Council to call in the application.

The University of Surrey was granted permission to build solar panels on a 43-hectare site west of Blackwell Farm, Hog’s Back near Guildford on November 6. In partnership with SEE Energy, the solar farm is said to provide 34% of the University’s current electricity needs. On its own, the facility will increase total renewable energy generation in Surrey by 13%.

Mr Hunt, whose constituency covers the southern and western part of the site, has written to the Minister of Housing, Communities and Local Government Angela Rayner to express his concern on the facility’s impact on the countryside. The southern parts of the site are assessed as meeting National Landscape criteria and recommended for inclusion within the revised part of the Surrey Hills boundary.

In his letter to Mrs Rayner, who is also the Deputy Prime Minister, Mr Hunt said he was worried the development “may set a precedent for emerging policy relating to National Landscape land”. He wrote: “Rather than selecting brownfield, this site selected is high value farmland in a geographically significant and nationally important landscape.”

He added: “Given the national importance of this decision, I support the view of Compton Parish Council and CPRE that the application should be called in and determined by a Planning Inspector.”

The secretary of state decides whether to review a planning decision based on government policies after a request to call in has been made. If approved, the Planning Inspectorate will hold a public inquiry into the proposal and produce a recommendation.

Surrey Campaign to Protect Rural England (CPRE) charity also wrote to the deputy PM in November, arguing the decision for the solar farm on green belt land be overturned. John Goodridge, Surrey CPRE chair, raised concerns on the impact of “agricultural land, encroachment on the green belt, harm to ancient woodland, the land’s legal status as candidate for inclusion in the Surrey Hills National Landscape”.

However, Guildford’s MP Zöe Franklin has defended the solar farm plans and she support’s the university’s aims through the investment.

The new Liberal Democrat MP said she “recognise[s] that solar farms can be contentious “important part of providing renewable energy for a sustainable, low-carbon future”. Mrs Franklin said: “This solar farm proposal is a move towards clean, affordable, local energy production and supports our local grid capacity in Guildford and our villages.”

She expressed her confidence in Guildford Borough Council’s planning committee having made the decision in line with planning regulations. But, the Guildford MP added she would also like to see the university include solar installations of their existing buildings and car parks.

A spokesperson for the University of Surrey said: “We are proud to play our part in reducing emissions - not just through this facility, but also through adding solar to the large roof on the Surrey Sports Park, progressing feasibility studies to maximise other on-campus generation - for example on our car parks - and a comprehensive energy efficiency programme.

“We hope others will follow our lead, as there is no time to waste in increasing renewable generation to reduce emissions and increase Surrey and UK energy security. This project is firmly in line with local and national planning policy priorities, and we look forward to bringing it on stream in the near future.”
